Mr. Samuel B. Buckles
Environmental Scientist Manager
Forsyth County Recycling & Solid Waste Department
426 Canton Highway
Cumming, Georgia 30040

RE: Eagle Point Landfill Quality Assurance Sampling – First 2024 Event
Permit No.: 058-012D(MSWL)

Dear Mr. Buckles:

As described in the scope of work provided to Forsyth County, Atlantic Coast Consulting, Inc. (ACC) provided a qualified groundwater scientist to attend one day of the Eagle Point Landfill's first 2024 sampling event to observe sampling procedures for quality assurance (QA) and to collect QA split samples for Forsyth County comparison. The sampling event occurred the week of January 8, 2024. ACC's field representative, Environmental Scientist Hunter Auld, was present to observe sampling activities on January 8, 2024. He met with Environmental Monitoring Services, LLC (EMS), the subcontracted sampling team of GFL Environmental and observed the sampling performed at the site and obtained QA split samples. ACC's QA split sampling included a subset of wells and surface water/underdrain sample points consisting of three groundwater wells, GWC-6, GWC-9, and GWC-11, one surface water location, SWC-9, and one underdrain location, SWC-5. The field purging and/or water quality parameter data generated by EMS for each sampling point was recorded by ACC on ACC's field sampling logs, and copies of these logs are provided in **Attachment A**. Discussed below are the sampling protocols, laboratory results, and summary and recommendations.

SAMPLING PROTOCOL/TECHNIQUES

Below is a summary of the sampling protocol and techniques used by GFL Environmental's sampling representatives, as observed by ACC.

- A new pair of nitrile gloves was donned prior to beginning sampling at a well. When purging was complete, another new pair of nitrile gloves was donned prior to sampling.
- A low-flow method of well purging was performed for groundwater sample collection using peristaltic pumps. Groundwater parameters (pH, specific conductance, and temperature) were allowed to stabilize prior to sampling. A turbidity reading equal

to or less than 10 nephelometric turbidity units (NTU) was achieved prior to sampling.

- When filling laboratory sample vials for groundwater, a low pump rate was used to minimize volatilization. In addition, no bubbles or headspace were allowed in the volatile organic analysis sample vials. Vacuum transfer caps were not used with the peristaltic pumps.
- When filling laboratory sample vials for surface water, grab sampling techniques were used to fill the sample containers directly from the surface water or underdrain sample point. Care was taken not to lose the laboratory bottle preservatives.
- The samples were apportioned into two sets of containers with bottle filling alternating between primary sample bottles and the ACC QA split sample bottles.
- The sample containers were placed on ice in a laboratory provided cooler immediately after the sampling process was complete.
- ACC's QA split sample containers were submitted for analyses to Analytical Environmental Services, Inc. (AES) by ACC, and GFL Environmental's samples were submitted to Pace Analytical Services, LLC by EMS.

Groundwater purging followed low-flow techniques, and minimal drawdown was achieved at all three locations. All three wells were purged with a recorded flow rate between the Environmental Protection Agency (EPA) recommended 0.1 to 0.5 liters per minute (EPA¹, 1996). As summarized in **Table 1**, groundwater samples collected for metals analysis were all collected at turbidity readings of 10 or less NTU. Groundwater samples were collected with the final three readings that met the following criteria: pH readings within 0.1 standard units, specific conductance within 10 percent, and temperature within 1 degree centigrade (**Attachment A**). Surface water metals were collected at low sample turbidities of 14 NTU at surface water point SWC-9 and 7 NTU at underdrain sample point SWC-5 (see **Table 2** and **3**).

QUALITY ASSURANCE SAMPLE LABORATORY RESULTS

The QA split groundwater samples were submitted to AES of Atlanta, Georgia for analysis of parameters as summarized on **Table 4**. Groundwater samples were analyzed for applicable Appendix I or Appendix II constituents as listed in 40 Code of Federal Regulations Part 258, Subpart E, 56 Federal Register 51032-51039 (October 9, 1991), and Rules for Solid Waste Management Chapter 391-3-4-.14 (22), as amended. AES is a National Environmental Laboratory Accreditation Program certified laboratory. Chain of custody was maintained by ACC during QA split sample collection, handling, and shipping.

The laboratory analytical results, quality control data, and chain of custody records for the QA samples are included in **Attachment B** of this report. The Surface water location SWC-9 was sampled and analyzed for Appendix I VOCs, chloride, and total dissolved solids (TDS) by GFL Environmental. However, the older surface water parameter list was analyzed for

¹ U.S. Environmental Protection Agency, 1996 Low-Flow (Minimal Drawdown) Ground-Water Sampling Procedures by Robert W. Puls and Michael J. Barcelona, EPA/540/S-95/504, April 1996.

the split sample with only chloride being split (new parameter list not provided before sampling event). The surface water split sample results and field water quality readings are summarized in **Table 2**. Underdrain location SWC-5 was sampled and analyzed for Appendix I. A summary of detections and field water quality readings for the underdrain sample are provided in **Table 3**. As summarized in **Table 3**, there were no detections of appendix I VOCs and only Appendix I arsenic and barium in the underdrain sample SWC-5. However, Appendix I metals are no longer required for analysis.

Groundwater monitoring wells GWC-6, GWC-9 and GWC-11 were sampled and analyzed for Appendix I parameters. A summary of the ACC groundwater QA split sample results is provided on **Table 5** and a summary of field water quality readings is provided on **Table 1**. The laboratory results indicate that there were detections of barium, cobalt, and/or zinc in the groundwater samples. Detected concentrations were below U.S. EPA Maximum Contaminant Levels (MCLs), where applicable. There is no established EPA MCL for cobalt or zinc. For reference, the zinc on **Table 5** was compared to the National Secondary Drinking Water Standard.

The first 2024 report titled, *Groundwater Statistical Analysis Report First Semi-Annual 2024 Sampling Event, Eagle Point Landfill, LLC, Permit # 058-012D(MSWL), Forsyth County, Georgia*, recommended a limited assessment monitoring analyte list for GWC-12R during the next event. If this limited assessment list is accepted and approved by Georgia Environmental Protection Division then the QC sample set should be adjusted to match the list.

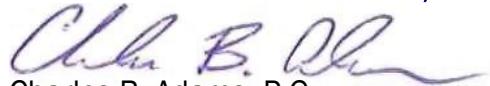

Summary and Recommendations

Based on ACC's observations, the field sampling procedures utilized by EMS followed general industry standards for well purging and sample collection for groundwater, surface water, and underdrain samples. The analytical results provided by the QA laboratory, AES, met quality control standards and are provided for Forsyth County comparison to GFL Environmental data. If requested, ACC is available to review the facility's Design & Operational Groundwater Monitoring Plan, corrective action plans, assessment monitoring plans, or other sampling and analysis plans specific to the Eagle Point Landfill to determine if the observed sampling event is compliant with applicable permit requirements.

ACC recommends QA split laboratory analysis for approximately ten percent of the total samples (three groundwater, one underdrain, and one surface water) during the July 2024 sampling event.

Sincerely,

ATLANTIC COAST CONSULTING, INC.

Charles B. Adams, P.G.
Project Manager

Laboratory Report

ANALYTICAL ENVIRONMENTAL SERVICES, INC.

January 15, 2024

Charles Adams
Atlantic Coast Consulting, Inc.
1150 Northmeadow Pkwy
Roswell GA 30076

RE: Forsyth County - Eagle Point Landfill

Dear Charles Adams: Order No: 2401791

Analytical Environmental Services, Inc. received 6 samples on January 8, 2024 3:37 pm for the analyses presented in following report.

"No problems were encountered during the analyses except as noted in the Case Narrative or by qualifiers in the report or QC Summary. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits.

AES's accreditations are as follows:

-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/23-06/30/24.

State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective through 06/30/24 and Total Coliforms/ E. coli, effective 04/25/23-04/24/24.

-AIHA LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Metals and PCM Asbestos), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/25.

These results relate only to the items tested as received. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Ioana Pacurar
Project Manager

25. Were trip blanks submitted?	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	listed on COC <input checked="" type="checkbox"/> not listed on COC <input type="checkbox"/>	

26. Comments: _____

I certify that I have completed sections 14-26 (dated initials).

DE 1/08/24**This section only applies to samples where pH can be checked at Sample Receipt.**

	Yes	No	N/A	Details	Comments
27. Have containers needing chemical preservation been checked?*	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>		
28. Containers meet preservation guidelines?	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>		
29. Was pH adjusted at Sample Receipt?	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>		

*Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

This also excludes metals by EPA 200.7, 200.8 and 245.1 which will be verified between 16 and 24 hours after preservation.

I certify that I have completed sections 27-29(dated initials).
