Mr. Samuel B. Buckles
Environmental Scientist Manager
Forsyth County Recycling & Solid Waste Department
1950 Sharon Road
Cumming, Georgia 30041

RE: Eagle Point Landfill Quality Assurance Sampling – Second 2019 Event
Permit No.: 058-012D(MSWL)

Dear Mr. Buckles:

As described in the Fee Estimate provided to Forsyth County on February 20, 2019, Atlantic Coast Consulting, Inc. (ACC) provided a qualified groundwater scientist to attend one day of the Eagle Point Landfill second 2019 sampling event for the purpose of quality assurance (QA) of sampling procedures and collection of QA split samples for Forsyth County comparison. The event occurred July 15 to 18, 2019. ACC's field representative, staff geologist Taylor Goble, was present to complete QA activities on July 17th. He met with the Advance Disposal Services (ADS) subcontracted sampling team, Environmental Monitoring Services, LLC (EMS) and observed the sampling being performed at the site and obtained QA split samples. The QA split sampling included a subset of wells and surface water/underdrain sample points that included: three (3) groundwater wells GWC-6, GWC-9, and GWC-12R, one (1) surface water location, SWC-9, and one (1) underdrain location, SWC-5. There were two members of the EMS field sampling team, therefore Mr. Goble joined the EMS team member responsible for sampling the above locations. The field purging and/or water quality parameter data generated by ADS's representatives for each sampling point was recorded by ACC on field sampling logs, and copies are provided in Attachment A. Discussed below are the sampling protocol techniques, laboratory results, and summary and conclusions.

Sampling Protocol/Techniques

Below is a summary of the sampling protocol and techniques used by ADS's sampling representatives, as observed by ACC.

- A plastic bag was placed at each well sampled, to place equipment on top of and prevent equipment from coming into contact with the ground.
- A new pair of nitrile gloves was donned prior to beginning sampling at a well. When purging was complete, another new pair of nitrile gloves was donned prior to sampling.
- A low-flow method of well purging was performed for groundwater sample collection using peristaltic pumps. Groundwater parameters (pH, specific conductivity and temperature) were allowed to stabilize prior to sampling. In addition, a turbidity reading of less than 1 nephelometric turbidity unit (NTU) was achieved prior to sampling.
- When filling laboratory sample vials for groundwater, a low pump rate was used to minimize volatilization. In addition, no bubbles or headspace were allowed in the volatile organic

analysis sample vials. Vacuum transfer caps were not used with the peristaltic pumps (the “straw method” was utilized by turning off the peristaltic pump, pulling the tubing out of the well, and reversing the flow of the pump so that volatile organic compounds were filled with water already in the tubing).

- A bailer was used to fill the amber laboratory sample container for pesticides and herbicides while sampling GWC-12R (the well sampled for Appendix II analysis).
- When filling laboratory sample vials for surface water, grab sampling techniques were used by dipping the sample container directly into the surface water or underdrain sample point. Care was taken not to lose the laboratory bottle preservatives.
- The samples were apportioned into two sets of containers with filling alternating between primary sample vials and the ACC split sample vials.
- The sample containers were placed on ice in a laboratory provided cooler immediately after the sampling process was complete.
- Sample containers were submitted for analyses, with ACC’s QA split samples being submitted to Eurofins TestAmerica Laboratories, Inc. (TAL) by ACC and Eagle Point Landfill’s samples being submitted to Pace Analytical Services, Inc. by EMS.

Groundwater purging followed low-flow techniques, and minimal drawdown was achieved at all three locations. All three wells were purged with a recorded flow rate in between the Environmental Protection Agency (EPA) recommended 0.1 to 0.5 liters per minute (EPA¹, 1996). As summarized in Table 1, groundwater samples collected for metals analysis were all collected at turbidity readings less than 1 NTU. Groundwater samples were collected with the final three readings that met the following criteria: pH readings within 0.1 standard units, conductivity within 10 percent, and temperature within 1 degree centigrade (Attachment A). Surface water or underdrain samples for metals analysis were collected at relatively low sample turbidities of 2 NTU (SWC-5) and 7 NTU (SWC-9) (see Tables 2 and 3).

QA Sample Laboratory Results

The QA split samples were submitted to TAL of Savannah, Georgia for analysis of parameters as summarized on Table 4. Groundwater samples were analyzed for applicable Appendix I/II constituents are as listed in 40 Code of Federal Regulations Part 258, Subpart E, 56 Federal Register 51032-51039 (October 9, 1991), and Rules for Solid Waste Management Chapter 391-3-4-.14 (22), as amended. TAL is a National Environmental Laboratory Accreditation Conference (NELAC) certified laboratory. Chain-of-custody was maintained during QA split sample collection, handling, and shipping.

The laboratory analytical results, quality control data, and chain-of-custody records for the QA samples are included in Attachment B of this report. Surface water location (SWC-9) was sampled and analyzed for metals (arsenic, barium, cadmium, chromium, lead, mercury, nickel, selenium, silver, and zinc), chloride, chemical oxygen demand (COD), total organic carbon (TOC), and cyanide. The surface water sample results and field water quality readings are summarized in Table 2. As summarized in Table 2, there were relatively low-level detections of chloride and barium in the surface water sample. Underdrain location SWC-5 was sampled and analyzed for Appendix I parameters. A summary of detections and field water quality readings for the underdrain sample is

¹ U.S. Environmental Protection Agency, 1996 Low-Flow (Minimal Drawdown) Ground-Water Sampling Procedures by Robert W. Puls and Michael J. Barcelona, EPA/540/S-95/504, April 1996.

provided in Table 3. As summarized in Table 3, there were detections of arsenic and barium in the sample.

Groundwater monitoring wells GWC-6 and GWC-9 were sampled and analyzed for Appendix I parameters and GWC-12R for Appendix II parameters. A summary of the ACC groundwater QA split sample results are provided in Table 5 and a summary of field water quality readings is summarized in Table 1. The laboratory results indicate that there were detections of barium, cobalt, nickel, and/or zinc in the groundwater samples, as well as detections of benzene, cis-1,2 dichloroethane, and sulfide in the sample from GWC-12R. Detected concentrations of barium and cis-1,2 dichloroethane were below U.S. EPA Maximum Contaminant Levels (MCLs). The detected concentration of benzene is above the EPA MCL. There is no established EPA MCL for cobalt, nickel, zinc, or sulfide. The Georgia MCL and National Secondary Drinking Water Standard were utilized for comparison of nickel and zinc concentrations, both of which were below each value.

Summary and Recommendations

Based on ACC's observations, the field sampling procedures utilized by EMS followed general industry standards for well purging, sample collection and sample handling for groundwater, surface water, and underdrain sample collection. The analytical results provided by TAL met quality control standards and are provided for Forsyth County comparison to ADS data. If requested, ACC is available to review the facility's Design & Operation Groundwater Monitoring Plan (GWMP) corrective action plans, assessment monitoring plans, or other sampling and analysis plans specific to Eagle Point Landfill to determine if the observed sampling event is compliant with applicable permit requirements.

Based on the results of this QA sampling event, ACC recommends QA split laboratory analysis for approximately 10 percent of the total samples (three groundwater, one underdrain, and one surface water) during the next sampling event scheduled for completion in January 2020.

Sincerely,

ATLANTIC COAST CONSULTING, INC.

Taylor Goble

Qualifiers

GC/MS VOA

| Qualifier | Qualifier Description |
|-----------|--|
| * | LCS or LCSD is outside acceptance limits. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

GC/MS Semi VOA

| Qualifier | Qualifier Description |
|-----------|--|
| * | LCS or LCSD is outside acceptance limits. |
| * | RPD of the LCS and LCSD exceeds the control limits |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

GC Semi VOA

| Qualifier | Qualifier Description |
|-----------|--|
| * | LCS or LCSD is outside acceptance limits. |
| * | RPD of the LCS and LCSD exceeds the control limits |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| p | The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported. |
| X | Surrogate is outside control limits |

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

| | |
|----------------|---|
| □ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

Receipt

The samples were received on 7/20/2019 7:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.1° C and 2.1° C.

GC/MS VOA

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-579904.

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-579904 recovered outside control limits for the following analytes: 1,2-Dichloroethane, 2,2-Dichloropropane and Vinyl acetate. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The laboratory control sample (LCS) for analytical batch 680-579904 recovered outside control limits for the following analytes: trans-1,4-Dichloro-2-butene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-580084.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 400-449248 and analytical batch 400-449506 recovered outside control limits for the following analytes: 3,3'-Dichlorobenzidine, 4-Chloro-3-methylphenol, 7,12-Dimethylbenz(a)anthracene and Isosafrole. These analytes were biased high in the LCS and LCSD that were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch preparation batch 400-449248 and analytical batch 400-449506 recovered outside control limits for the following analytes: Kepone.

Method(s) 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch preparation batch 400-449248 and analytical batch 400-449506 recovered outside control limits for the following analytes: N-Nitrosomethylamine.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8081B/8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: GWC-12 (680-171917-1). These results have been reported and qualified.

Method(s) 8151A: Surrogate recovery for the following sample was outside control limits: GWC-12 (680-171917-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8151A: The laboratory control sample (LCS) for preparation batch 680-579364 and analytical batch 680-579839 recovered outside control limits for the following analytes: 2,4,5-T and 2,4-D. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data has been reported.
