1.0 Introduction

On behalf of Forsyth County, Georgia, Atlantic Coast Consulting, Inc. (ACC) is providing this Semi-Annual Groundwater & Surface Water Monitoring Report for the Hightower Road Municipal Solid Waste Landfill (MSWLF). The purpose of this report is to provide a summary and evaluation of the results of the recent groundwater and surface water monitoring event, which is required by the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management 391-3-4-.14. This report includes a professional geologist certification and compliance statement, a summary of site conditions, a description of sampling and analysis, a potentiometric map based on groundwater level measurements recorded during this event, determination of groundwater flow rate and direction, a summary of analytical results, and a statistical analysis of the analytical data.

2.0 Professional Geologist Certification and Compliance Statement

This report has been prepared by a registered professional geologist in general accordance with Georgia Chapter 391-3-4 Solid Waste Regulations. The seal below certifies that a sufficiently trained and experienced qualified groundwater scientist with a baccalaureate degree in natural sciences has prepared and/or reviewed this report. The undersigned is qualified to make sound, professional judgments regarding groundwater monitoring and contaminant fate and transport. The information contained in this report is to the best of the undersigned's knowledge and belief, true, accurate, and complete.

ATLANTIC COAST CONSULTING, INC.

Charles B. Adams, P.G.

This certification statement is provided in accordance with the Solid Waste Management Rules of Georgia Chapter 391-3-4-.07(3)(v). This Semi-Annual Groundwater & Surface Water Monitoring Report is provided to document the results of the December 2021 sampling event at the Hightower Road MSWLF. As documented in this report, there were constituent concentrations above established compliance standards. Therefore, as a qualified groundwater scientist, I certify that these constituents are not in compliance with established standards as documented herein. The facility complies with appropriate Rules of Georgia Solid Waste Management, because Assessment of Corrective Measures (ACM) Studies have been completed and a Corrective Action Plan (CAP) is being implemented.

3.0 Summary of Site

The Forsyth County Hightower Road Landfill is a closed MSWLF consisting of four phases (Phases I through IV) located in northwest Forsyth County, Georgia. Phases I and II operated under EPD Solid Waste Handling Permit No. 058-006D(L) from 1986 until 1994, Phase III under EPD Solid Waste Handling Permit No. 058-009D(SL) from 1991 until 1995, and Phase IV under EPD Solid Waste Handling Permit No. 058-010D(SL) from 1993 until 1997. Closure activities for the entire facility were completed in 1999.

An ACM report completed in 2004 concluded that the source of volatile organic compounds (VOCs) in groundwater at the facility was primarily due to landfill gas (LFG), and various means of reducing LFG impacts to groundwater were evaluated. The ACM proposed a combination of monitored natural attenuation (MNA) and LFG migration control to remediate the site. Forsyth County subsequently held a public meeting to review the ACM results and solicit comments from the public regarding the selection of corrective measures. After completion of the public comment phase, corrective measures that were demonstrated to meet the requirements of Rule 391-3-4-.14(39) in the ACM were selected for long-term implementation at the facility. The measures consist of MNA and LFG migration control. The ACM was approved by EPD in 2005.

ACC submitted the *Interim CAP* to EPD for review in January 2007. The interim CAP proposed the implementation of MNA from the ACM, as well as the installation of several LFG interceptor vent trenches and the retrofitting of a passive vacuum source (individual turbines) to the existing in-waste gas vents. Three LFG interceptor trenches were completed in late 2007 and have reduced methane gas concentrations in methane monitoring wells. A Final CAP was submitted to EPD in July 2008 and presented a milestone schedule for implementing further corrective actions. The EPD conditionally approved the *Request for Minor Modification to Solid Waste Handling Permit* that added the CAP to the permit (pending submittal of remedial cost information), and annual MNA groundwater sampling was initiated during the second 2007 event. In response to the conditional approval of the CAP, a table summarizing actual and estimated remedial costs for the corrective action program and a revised CAP implementation schedule were submitted to EPD March 12, 2009. In accordance with this updated CAP schedule, Corrective Measures Status Evaluation Reports are completed every three years and include evaluations of the selected long-term remedies.

Forsyth County submitted a *Request for Minor Modification to Solid Waste Handling Permit* for a gas extraction system in September 2009. That design included replacing six passive vents with vertical gas extraction wells equipped with solar-powered flare/blower units (the vents included two vents in Phase I and four vents in Phase II). This design was approved by EPD on April 15, 2010. Forsyth County has implemented this design, and the installation certification report was submitted to EPD on October 14, 2011.

Off-site well W-3 was abandoned in May 2014 and off-site well W-2 was abandoned in September 2014. The sampling requirements for off-site wells W-2 and W-3 were removed from the permit via a *Request for Minor Modification to Solid Waste Handling Permit*, which was approved by EPD June 16, 2015.

Forsyth County submitted a March 2017 *Request for Minor Modification to Solid Waste Handling Permit* to remove all off-site sampling requirements from the permit for two off-site water wells (W-1 and W-4) and two “springs” (S-1 and S-2), based on a 13-year history of sampling analysis, with no confirmed VOC detections in well samples or spring samples, and

only sporadic detections of naturally occurring metals barium, copper, and/or zinc in off-site well samples. The March 2017 *Request for Minor Modification* also included an adjustment to the frequency for full Appendix II analyte monitoring to correspond with triennial corrective measures status evaluation reports. EPD approved the permit modification on April 20, 2017.

Forsyth County provided adjacent property owner and public notification of sample results above groundwater protection standards (GWPS) in two wells along the northern property boundary in accordance with Rule 391-3-4-.17(6) and EPD correspondence dated April 25, 2017. A copy of the publisher's affidavit for the newspaper notice and adjacent property owner notifications were provided to EPD July 7, 2017, October 2, 2017, and April 24, 2018. Future public notifications will also be submitted to EPD, if required.

3.1 Geologic Setting

The site is divided into two different lithologies by the Allatoona Fault, which runs through the northwest section of the site. All four phases of the landfill are located to the southeast of this fault and are underlain by the Canton formation. The Canton formation is often considered to be the inner-most belt of the Piedmont physiographic province; belts to the northwest of this formation are designated as part of the Blue Ridge physiographic province. The Canton formation is composed of carbonaceous/graphitic, garnetiferous mica schist inter-layered with amphibolite. The Chattahoochee fault runs sub-parallel to and southeast of the Allatoona Fault; the area between these two faults (that includes much of this site) is commonly referred to as the "Dahlonega Gold Belt".

3.2 Monitoring Program

There are 13 groundwater monitoring network wells and three AMW series wells utilized to monitor groundwater conditions near Phase I of the facility, and 34 monitoring network wells and ten AMW series wells to monitor Phases II – IV. Throughout the site, well clusters have been installed to monitor vertical gradients and/or stratification of potential impacts. The shallowest wells have no suffix (e.g., GWC-8), the intermediate wells have an "A" suffix (e.g., GWC-8A), and the deepest wells (installed in rock) have an "R" suffix (e.g., GWC-8R).

Surface water is monitored for permit-required parameters (Georgia Table 1 Surface Water Parameters) at 13 locations around the facility. Eleven surface water sampling points (SWA-1, SWA-2, and SWC-1 through SWC-9) are monitored semi-annually at the landfill. When water is present, surface water samples are analyzed for chemical oxygen demand (COD), total cyanide, total organic carbon, chloride, and metals. Five surface water locations (SWC-1, SWC-4, SWC-4A, SWC-4B, and SWC-6) are also sampled for Appendix I VOCs. (See **Table A** for a summary of sampling requirements).

During the first semi-annual sampling event, assessment monitoring wells are sampled for Appendix II VOCs and Appendix I metals, and detection wells are sampled for Appendix I parameters as listed in **Table A**. During the second semi-annual monitoring event, assessment wells are sampled for Appendix I parameters plus any verified Appendix II analytes, select wells are sampled for CAP-required MNA parameters, and detection wells are sampled for Appendix I parameters. Once every three years, assessment monitoring wells are sampled for the full Appendix II analyte list; monitoring locations were sampled for the full Appendix II analyte list during the June 2019 event. The next triennial event is scheduled for June 2022. Some AMW

series wells are sampled/analyzed for Appendix I VOCs or Appendix II VOCs and Appendix I metals as warranted by the data (i.e., to provide delineation) and are sampled for the required parameters listed in **Table A**. Appendix I VOCs are collected from SWC-1, SWC-4, SWC-4A, SWC-4B, and SWC-6 for delineation purposes. Any Appendix II constituents that become verified in an assessment well are added to the analyte list for the well it was detected in for the second semi-annual monitoring event. Historically, the addition of Appendix II analysis to assessment wells has not yielded additional consistently detected analytes.

As described in the July 26, 2013 *Response to EPD Comments*, the landfill has redundant monitoring in the saprolite/bedrock aquifer, and these two zones have been demonstrated to be interconnected in the 1992 *Site Assessment Report*; therefore, if these wells are dry, the well complements are sampled, as shown on the following table:

ID	Complement
GWA-1	GWA-1A
GWC-3	GWC-3A
GWC-4	GWC-4A
GWC-8	GWC-8A
GWC-14	GWC-14A
GWC-15	AMW-1
GWC-16A	AMW-2
GWC-18	AMW-5

The CAP requires sampling of MNA parameters from assessment wells on an annual basis; MNA sampling began with the second 2007 monitoring event. These MNA parameters include dissolved oxygen, nitrate, sulfate, ferrous iron, chloride, oxidation-reduction potential (ORP), carbon dioxide, total dissolved solids (TDS), and alkalinity. **Table A** presents a summary of the current analyte lists for all monitoring locations. The CAP-prescribed schedule for review of MNA data is on a triennial basis. The first MNA/CAP review was completed during the second 2010 event, and subsequent reviews were completed during the second 2013, second 2016, and second 2019 events. The reviews are submitted to EPD as attachments to the second semi-annual groundwater monitoring reports.

In accordance with the groundwater monitoring plan, all detected analyte concentrations are compared to a GWPS. The GWPS is the United States Environmental Protection Agency (EPA) Maximum Contaminant Level (MCL), or in cases where no MCL exists, an alternate GWPS is utilized. Per Rule 391-3-4-.14(32), alternate GWPS were established in the ACM for analytes that have no established MCL.

3.3 Purging and Sampling Procedures

All samples were collected in accordance with the EPD-approved groundwater monitoring plan for Forsyth County – Hightower Road Landfill. Groundwater samples were collected following the procedures summarized below:

- All sampling equipment was decontaminated prior to use at each sampling location.
- New gloves were donned prior to sampling and changed appropriately to avoid cross contaminating samples or sampling equipment.

- Depth to groundwater was measured with an electronic water level indicator and recorded prior to sample collection and used to calculate purge volume.
- A minimum of three well volumes were removed, or the well was purged dry. Disposable Teflon® bailers were used to purge all wells, except for PH1-GWA-3A, PH1-GWC-2, GWA-1A, GWC-8R, GWC-14R, AMW-1, and AMW-2, where a Grundfos stainless steel submersible pump attached to disposable Teflon® lined tubing was used.
- Parameters including pH, temperature, turbidity, and specific conductance were measured and recorded during purging and at the time of sampling. Field-collected parameters are summarized in **Table 1**.
- A brief groundwater recovery period was allowed for each well.
- Representative VOC samples were collected following purging. Samples for metals analysis were collected immediately if turbidity was less than 10 nephelometric turbidity units (NTU), or if turbidity was above 10 NTU on the following day (within 24 hours of purging) after allowing the water column to settle to obtain less turbid samples. Immediately after sample collection, all containers were labeled, placed on ice in laboratory-provided coolers, and delivered to the laboratory for analysis under chain-of-custody documentation.
- Trip blanks were provided for the event and analyzed for Appendix I VOCs.
- Two field blanks were collected during the event and analyzed for Appendix I constituents.

Surface water samples were collected utilizing grab sampling techniques following the procedures summarized below:

- New gloves were donned prior to sampling and changed appropriately to avoid cross contaminating samples.
- Parameters including pH, temperature, turbidity, specific conductance, and dissolved oxygen were measured and recorded at the time of sampling.
- Immediately after sample collection, all containers were labeled, placed on ice in laboratory-provided coolers, and delivered to the laboratory for analysis under chain-of-custody documentation.

Groundwater monitoring well information, including depth to water measurements and groundwater elevation calculations are included in **Table 2**. Laboratory analytical data are summarized in **Table 3** (Organics) and **Table 4** (Metals).

3.4 Laboratory Methods

Laboratory analyses were performed in accordance with approved U.S. EPA methodology as set forth in *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, Third Edition, December 1996, SW-846, and subsequent revisions. During this event and prior sampling events, independent samples from each approved groundwater monitoring location were collected and analyzed for the applicable Appendix I (and/or Appendix II where applicable) constituents as listed in 40 Code of Federal Regulations (CFR) Part 258, Subpart E, 56 Fed. Reg. 51028-51029 (October 9, 1991), and *Rules for Solid Waste Management* [Chapter 391-

3-4-14(22)], as amended. The laboratory analytical results, quality control data, and chain-of-custody records for this semi-annual groundwater monitoring event are included in **Attachment A** of this report. Results of these analyses are discussed in the following sections.

3.5 Laboratory Certification

Analytical Environmental Services, Inc. (AES) is an approved laboratory (in accordance with 391-3-26-.05) for the analysis of solid/hazardous waste and is accredited by National Environmental Laboratory Accreditation Program (NELAP). Accreditation issuing authorities, certification identifications, and expiration dates are provided in the laboratory analytical reports in **Attachment A**.

4.0 Discussion of Sampling Results

Samples from the second 2021 semi-annual monitoring event were collected December 13-20, 2021. The samples were analyzed by AES of Atlanta, Georgia. Samples were collected and analyzed from network detection and assessment monitoring wells for Appendix I parameters during this monitoring event as detailed in **Table A**. Monitoring well GWC-15 had an obstruction preventing it from being sampled and GWC-16A was dry or purged dry and did not recharge and was not sampled. Groundwater monitoring wells AMW-1 and AMW-2 were sampled as surrogate wells for GWC-15 and GWC-16A, respectively.

4.1 Groundwater

An evaluation of the December 2021 semi-annual groundwater sampling results indicates that one or more VOCs were detected in 13 network groundwater well samples and four AMW series well samples as summarized on **Table 3**. The concentrations of five VOCs in one or more assessment well samples were above the respective GWPS: chloroethane, cis-1,2-dichloroethene (cis-1,2-DCE), tetrachloroethene (PCE), trichloroethene (TCE), and vinyl chloride. A summary of organic detections is presented below.

- All verified, detected VOCs were in samples from assessment monitoring wells or AMW series wells.
- During the previous event, there was an unverified detection of 1,2,3-trichloropropane at 33 micrograms per Liter ($\mu\text{g}/\text{L}$) in the sample from GWC-14R. This detection did not reoccur during this event.
- The concentrations of cis-1,2-DCE and TCE in the sample from AMW-1 (140 $\mu\text{g}/\text{L}$ and 48 $\mu\text{g}/\text{L}$, respectively) were above the respective GWPS (70 $\mu\text{g}/\text{L}$ and 5 $\mu\text{g}/\text{L}$). The concentrations of cis-1,2-DCE and TCE in the sample from AMW-12R (2.3 $\mu\text{g}/\text{L}$ and 2.2 $\mu\text{g}/\text{L}$, respectively) that is downgradient of AMW-1 were below the respective GWPS.
- The concentrations of PCE in samples from PH1-GWC-3, PH1-GWC-3A, AMW-1, and AMW-12R were above the GWPS (5 $\mu\text{g}/\text{L}$). [See report *Section 4.2* for further discussion of these detections.]
- The concentrations of TCE in samples from PH1-GWC-3 and PH1-GWC-3A were above the GWPS (5 $\mu\text{g}/\text{L}$). TCE was not detected in the SWC-6 sample that is located downgradient of PH1-GWC-3.

- The concentrations of chloroethane, cis-1,2-DCE, and vinyl chloride in the sample from GWC-14A (5.0 µg/L, 77 µg/L, and 19 µg/L, respectively) were above the respective GWPS (4.6 µg/L, 70 µg/L, and 2 µg/L). These compounds were not detected in GWC-13 that is downgradient of GWC-14A. They were also not detected in the shallower well GWC-14, and cis-1,2-DCE was not above the GWPS, and vinyl chloride was not detected the deeper well GWC-14R.
- The detections of VOCs in groundwater are addressed by remedies in the CAP.
- The overall pattern of VOC detections indicates natural attenuation is occurring, as evidenced by VOC reduction from peak levels and patterns of declining parent compounds like PCE coupled with an increase in daughter compounds (cis-1,2-DCE). Groundwater conditions continue to improve where the total number of sample concentrations above a GWPS has decreased from 29 during the first 2007 event to ten during the second 2021 event. The total number of concentrations above a GWPS that were also identified as SSIs has also decreased from 25 during the first 2007 event to ten during the second 2021 event.

A summary of metals detected during this event is presented in **Table 4**. Appendix I metals barium, chromium, cobalt, nickel, and zinc were detected in one or more groundwater well samples. During this event, there was an unverified detection of chromium in the sample from GWC-12A that will be evaluated next event. All detected groundwater metals concentrations were less than their respective GWPS. Low levels of barium were detected in most groundwater samples, and cobalt, nickel, and zinc were detected less frequently. These metals are considered naturally occurring in site soils.

4.2 Performance Monitoring

In accordance with the CAP, MNA parameters are collected annually during the second monitoring event. MNA data are evaluated in triennial corrective measures status evaluation reports and collected from select wells in the assessment monitoring program, three AMW series wells (AMW-4, AMW-5, and AMW-14), and unimpacted upgradient well PH1-GWA-4 (refer to **Table A**). Annual MNA laboratory analysis includes the following: dissolved oxygen, nitrate, sulfate, ferrous iron, chloride, ORP, carbon dioxide, TDS, and alkalinity. A summary of MNA parameter data is provided in **Table 4a**. An evaluation of the CAP program remedies is completed every three years and previous corrective measures status evaluation reports were submitted to EPD with the second groundwater event monitoring reports for 2010, 2013, 2016, and 2019. The next Corrective Measures Status Evaluation Report will be provided in conjunction with the second 2022 report.

Forsyth County is currently conducting a pilot test to evaluate the effectiveness of encapsulated potassium permanganate (KMnO₄) in reducing VOCs in groundwater near AMW-12/12R. Work is being conducted under the EPD approved Underground Injection Control (UIC) Permit No. GAW000753. This pilot test/UIC permit is the result of a multi-year process to evaluate enhancing the groundwater CAP. The selected remedy has been evaluated through the feasibility assessment process and implemented per the November 24, 2020 *Groundwater Pilot Test Work Plan*, submitted as Georgia EPD Online System (GEOS) Submittal ID: 519457. As part of the UIC permit requirements, quarterly reports are submitted to EPD Watershed Protection Branch (1st quarter 2021 Submittal ID: 567207, 2nd quarter 2021 Submittal ID: 579724, 3rd quarter 2021 Submittal ID: 597718, and 4th quarter 2021 Submittal ID: 617224). This semi-annual groundwater monitoring report, conducted

under the solid waste permit, will also be submitted to the EPD Watershed Protection Branch as part of the UIC permit requirement. As noted in report *Section 4.1* the concentration of PCE was above the GWPS in the sample from AMW-12R. Groundwater well AMW-12 was sampled and analyzed for Appendix I VOCs and selected indicator parameters January 18, 2022, as part of the pilot test. In the January 2022 sample from AMW-12R PCE was detected at 2.9 µg/L below the GWPS of 5.0 µg/L. The January 2022 laboratory analytical data is provided in **Attachment A**.

4.3 Hydraulic Gradient and Groundwater Flow Velocity

The December 2021 groundwater level measurements were used to calculate groundwater elevations and to prepare a potentiometric surface map (**Figure 1**). The groundwater flow velocity was calculated using the potentiometric surface depicted in **Figure 1** and estimated hydraulic conductivity measurements from previous studies of the facility. Groundwater flow velocity calculations are provided in **Table 5**. The results of these calculations indicate that groundwater flows at a calculated rate of approximately 168 feet per year, generally to the northeast and northwest (in a sub-radial pattern).

4.4 Surface Water

Eleven surface water sampling points are monitored semi-annually at the landfill and two points, identified as SWC-4A and SWC-4B, have been added for delineation (all points are listed in **Table A** and locations depicted on **Figure 1**). Locations SWC-7, SWC-8, and SWC-9 were dry during this event and were not sampled. Surface water samples are analyzed for permit-required parameters COD, total cyanide, total organic carbon, chloride, and metals (as summarized on **Table 6**). Low-level concentrations of total organic carbon, chloride, barium, and/or zinc were detected in one or more samples.

Due to detections of VOCs above a GWPS in samples from PH1-GWC-3 and PH1-GWC-3A, Appendix I VOC sampling/analysis has been added¹ to SWC-6 (see **Table A**). In addition, for delineation purposes SWC-1, SWC-4, SWC-4A, and SWC-4B are monitored for Appendix I VOCs and results are included in **Attachment A**. The added surface water points are sampled and analyzed to verify that no VOCs are entering the tributaries of the Etowah River. The SWC-4B location serves as a point to delineate VOC results from AMW-12R. There were no detections of VOCs in the SWC-1, SWC-4, SWC-4A, and SWC-4B samples.

There was a detection of cis-1,2-DCE in the sample from SWC-6 at a concentration of 5.3 µg/L. This SWC-6 concentration of cis-1,2-DCE is well below the MCL of 70 µg/L (there is no instream water quality standard for cis-1,2-DCE). There have been four previous detections of cis-1,2-DCE in the sample from SWC-6.

5.0 Statistical Analysis

According to EPD Rules for Solid Waste Management, a determination must be made as to if there is a statistically significant increase (SSI) over background values for each constituent that is part of the groundwater monitoring program.

¹ Refer to correspondence dated June 14, 2017, titled “*Response to April 25, 2017 EPD Letter*” for the demonstration that SWC-6 is appropriate to monitor groundwater to surface water discharge from PH1-GWC-3/3A.

5.1 Statistical Methodology

Paragraph (18) of Georgia Rule 391-3-4-.14 requires using one of the following types of tests: a) parametric analysis of variance (ANOVA), b) ANOVA based on the ranks followed by multiple comparison procedures, c) a tolerance or prediction interval analysis, d) a control chart approach that gives control limits for each constituent, or e) another statistical test method that meets the performance standards of paragraph (19). The statistical analysis was performed in accordance with the Solid Waste Rules. Pertinent sections of the EPA guidance document titled *Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities Unified Guidance (March 2009)* are utilized, as necessary. The document recommends using one of three types of tests: ANOVA, tolerance limits, or prediction interval analysis. The document stipulates that a parametric test should be used for all constituents where:

1. The residuals of the data are normally distributed.
2. There is homogeneity of groundwater quality data variance among wells.
3. The proportion of non-detection is less than 15%; and
4. There are no significant seasonal effects upon the data.

If these criteria are not met, then a non-parametric test should be used. None of the constituents meet all four of the criteria. As a result, the statistical test chosen for every Appendix I constituent in the current sampling event was the Kruskal-Wallis, non-parametric ANOVA. This test is based on ranks followed by multiple comparison procedures to identify specific sources of difference. As presented in the CAP, groundwater VOCs occur in two distinct areas of the site. VOCs in groundwater in and around Phase I are not contiguous with those on the north side of the site around Phase II MSWLF and Phase III MSWLF. As a result, two sets of statistics are utilized, where one set considers only Phase I, and the other set considers the rest of the site.

For the Phase I area, three of five upgradient wells (PH1-GWA-1, PH1-GWA-1A, and PH1-GWA-2) have historic VOC detections and are evaluated statistically along with hydraulically downgradient wells. Therefore PH1-GWA-3A and PH1-GWA-4 are used for upgradient statistical comparisons. To maintain the integrity of PH1-GWA-4 as a background monitoring location in statistical calculations, the unverified arsenic detection from the December 2011 event has been removed from the statistical database to avoid false negative results. For Phases II-IV of the facility, GWA-1A and GWA-3 have had historical VOC detections and are statistically evaluated as downgradient wells. For Phases II-IV, wells GWA-1 and GWA-2 are used as upgradient wells for statistical purposes. The datasets from surrogate wells AMW-1 and AMW-2 are appended to the datasets for GWC-15 and GWC-16A, respectively, for statistical analysis.

As noted in the CAP, concentration trends in many wells appeared to change following capping activities completed in late 1999 (pathways of gas migration possibly altered). Based on review of the database, it was thought to be more conservative to run the statistical analysis with data after capping was completed. Data from the most recent 12 events are evaluated in statistical analysis.

The Kruskal-Wallis non-parametric ANOVA method compares each well with a group of background wells. The Kruskal-Wallis test can only determine which compliance well results are elevated with respect to background but cannot determine which specific samples produce the statistical trigger. Therefore, this statistical method may identify false positive

SSIs in wells with historical detections of a parameter when that parameter was not detected in samples from the current sampling event.

Further analysis with a non-parametric tolerance interval (NPTI) test shows which specific results from a well indicate an increase over background. The Kruskal-Wallis test was used as a screening statistical test, and the parameters that showed SSIs from Kruskal-Wallis were further analyzed using an NPTI. The NPTI test has the capability of pinpointing which results cause the SSI and can identify Kruskal-Wallis false positive SSIs for parameters not detected in the current sampling data.

For confirmed SSIs, calculated using the methodology above, that are also at a concentration above the relevant GWPS, confidence limits are calculated to determine if the 95% lower confidence limit (LCL) is above the GWPS. In accordance with the *Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities Unified Guidance (March 2009)*, the confidence limits are compared to the GWPS, and a statistically significant level (SSL) is identified when the 95% LCL is above the GWPS.

5.2 Statistical Results

Kruskal-Wallis non-parametric ANOVA and NPTI statistical tests are included in **Attachment B**. The wells with concentrations identified as an SSI over background for the current event as determined by the Kruskal-Wallis ANOVA and the NPTI methods are listed in **Table 7**. The wells with identified SSIs over background and concentrations above a GWPS are evaluated to determine if concentrations are SSLs in **Table 8**.

Nineteen wells had one or more SSIs during this event, and four wells had SSIs identified for analyte concentrations that were above the respective GWPS (see **Table 7**). Groundwater detections are addressed by the CAP remedies. Thirteen wells with VOC SSIs are currently in assessment monitoring. Seven wells with metals SSIs are in the detection monitoring program. The detection wells with SSIs were triggered only by low levels of barium, cobalt, and/or zinc. The current concentrations of barium, cobalt, and zinc are typical of unimpacted groundwater in the region, and concentrations are well below the respective GWPS. It is recommended that these seven wells remain in detection monitoring (**Table A**).

6.0 Summary and Recommendations

The results of the data evaluated from the December 2021 sampling event are summarized below:

- Groundwater generally flows, in a sub-radial pattern, towards the northeast and northwest, at a calculated rate of approximately 168 feet per year.
- VOCs at concentrations above respective GWPS in network wells are limited to those in assessment monitoring status. Detections of groundwater VOCs are addressed by the CAP corrective remedies.
- Low-level concentrations of metals are detected in upgradient and downgradient groundwater and surface water sampling points. No verified groundwater metals concentrations were above a GWPS, and detected metals are likely naturally occurring.
- There were SSIs for VOC concentrations in samples from assessment monitoring wells. The only SSIs for wells currently in detection monitoring were for low-level concentrations of barium (PH1-GWB-1, PH1-GWC-1, PH1-GWC-4, GWC-1, GWC-7, and GWC-9), cobalt (GWC-14), and zinc (GWC-9), all below respective GWPS; these detections are attributed to their typical presence in regional soils.
- SWC-6 had a verified, low-level detection of cis-1,2-DCE at a concentration well below the MCL. There is no established instream water quality standard for cis-1,2-DCE. Location SWC-6 is monitored for VOCs to delineate concentrations of VOCs in samples from groundwater wells PH1-GWC-3 and PH1-GWC-3A. The concentration of cis-1,2-DCE in the sample from SWC-6 is significantly less than the concentrations in PH1-GWC-3 and PH1-GWC-3A. Four additional surface water points were monitored for VOCs (SWC-1, SWC-4, SWC-4A, and SWC-4B), and no VOCs were detected in these samples.
- The overall pattern of VOC detections indicates natural attenuation is occurring, as evidenced by VOC reduction from peak levels and patterns of declining parent compounds like PCE coupled with an increase in daughter compounds (cis-1,2-DCE). Groundwater conditions continue to improve where the total number of sample concentrations above a GWPS has decreased from 29 during the first 2007 event to ten during the second 2021 event. The total number of concentrations above a GWPS that were also identified as SSIs has also decreased from 25 during the first 2007 event to ten during the second 2021 event.

Forsyth County will continue implementing the EPD-approved monitoring and corrective action program at the Hightower Road MSWL. The next semi-annual monitoring event is scheduled for June 2022.

Table 5
Groundwater Flow Rate Calculation
Forsyth County - Hightower Road MSWLF
December 2021 Sampling Event

Equation

$$v = \frac{k(i)}{n_e}$$

where: V = groundwater velocity
k = hydraulic conductivity
i = hydraulic gradient (dh/dl)
dh = the difference between two hydraulic heads
dl = the flow path length between the two piezometers
n_e = effective porosity

Values Used in Calculation

k =	1.0	ft/day	(reference 1)
i ¹ =	0.081	ft/ft	PH1-GWA-2 to GWC-1
i ² =	0.109	ft/ft	GWA-3 to GWC-2
i ³ =	0.088	ft/ft	GWA-2 to GWC-23
i ⁴ =	0.091	ft/ft	GWC-8 to AMW-11R
i ^{AVE} =	0.092	ft/ft	Average
n _e =	0.20	unitless	(reference 1)

Calculation

$$v = \frac{(1.0 \text{ ft/day}) (0.092 \text{ ft/ft})}{20\%}$$

$$v = 0.46 \text{ ft/day}$$

$$v = 168 \text{ ft/year}$$

Notes: ft = feet

RE: Forsyth County-Hightower Road MSWLF

Dear Charles Adams:

Order No: 2112I55

Analytical Environmental Services, Inc. received 56 samples on 12/14/2021 5:52:00 PM for the analyses presented in following report.

“No problems were encountered during the analyses except as noted in the Case Narrative or by qualifiers in the report or QC Summary. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits.

AES’s accreditations are as follows:

-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/21-06/30/22.

State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective through 06/30/22 and Total Coliforms/ E. coli, effective 04/20/20-04/24/23.

-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Metals and PCM Asbestos), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/23.

These results relate only to the items tested as received. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Paris Masoudi

27. Comments: _____

I certify that I have completed sections 16-27 (dated initials). SH 12/16/21

This section only applies to samples where pH can be checked at Sample Receipt.

	Yes	No	N/A	Details	Comments
28. Have containers needing chemical preservation been checked? *	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>		
29. Containers meet preservation guidelines?	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>		
30. Was pH adjusted at Sample Receipt?	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>		

* Note: Certain analyses require chemical preservation but must be checked in the laboratory and not upon Sample Receipt such as Coliforms, VOCs and Oil & Grease/TPH.

This also excludes metals by EPA 200.7, 200.8 and 245.1 which will be verified between 16 and 24 hours after preservation.

I certify that I have completed sections 28-30 (dated initials). SH 12/16/21

RE: Forsyth County- Hightower Road MSWLF

Dear Charles Adams:

Order No: 2112J26

Analytical Environmental Services, Inc. received 56 samples on 12/16/2021 2:00:00 PM
for the analyses presented in following report.

“No problems were encountered during the analyses except as noted in the Case Narrative or by qualifiers in the report or QC Summary. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits.

AES’s accreditations are as follows:

-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/21-06/30/22.

State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective through 06/30/22 and Total Coliforms/ E. coli, effective 04/20/20-04/24/23.

-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Metals and PCM Asbestos), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/23.

These results relate only to the items tested as received. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Paris Masoudi

Case Narrative

Sample Receiving Nonconformance:

Per Betsy McDaniel via email 12/16/2021 3:27pm, sample 2112J26-052B "AMW-2" was analyzed for Chloride in addition to the analysis requested on the Chain of Custody (COC) and sample 2112J26-047B "GWC-8A" was analyzed for TDS and Alkalinity in addition to the analysis requested on the COC.

The holding time for Nitrate analysis for sample 2112J26-047B was missed by the laboratory. Sample was re-collected and submitted under AES ID 2112P59.

Revision 1/06/22:

At the request of Betsy McDaniel via email on 1/06/22, missing Chloride result was added to 2112J26-052B "AMW-2."

RE: Forsyth County-Hightower Road MSWLF

Dear Charles Adams:

Order No: 2112P59

Analytical Environmental Services, Inc. received 2 samples on 12/20/2021 12:46:00 PM for the analyses presented in following report.

“No problems were encountered during the analyses except as noted in the Case Narrative or by qualifiers in the report or QC Summary. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits.

AES’s accreditations are as follows:

-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/21-06/30/22.

State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective through 06/30/22 and Total Coliforms/ E. coli, effective 04/20/20-04/24/23.

-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Metals and PCM Asbestos), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/23.

These results relate only to the items tested as received. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Paris Masoudi

Submission of samples to the laboratory constitutes acceptance of AES's Terms & Conditions. Client assumes sole responsibility for damage or loss of samples before we accept them. Samples received after 3PM or on Saturday are considered as received the following business day. If no TAT is marked on COC, AES will proceed with standard TAT. Samples are disposed of 30 days after completion of report unless other arrangements are made.

RE: Forsyth County Pilot Test

Dear Betsy McDaniel:

Order No: 2201J18

Analytical Environmental Services, Inc. received 4 samples on 1/18/2022 1:17:00 PM for the analyses presented in following report.

“No problems were encountered during the analyses except as noted in the Case Narrative or by qualifiers in the report or QC Summary. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits.

AES’s accreditations are as follows:

-NELAP/State of Florida Laboratory ID E87582 for analysis of Non-Potable Water, Solid & Chemical Materials, Air & Emissions Volatile Organics, and Drinking Water Microbiology & Metals, effective 07/01/21-06/30/22.

State of Georgia, Department of Natural Resources ID #800 for analysis of Drinking Water Metals, effective through 06/30/22 and Total Coliforms/ E. coli, effective 04/20/20-04/24/23.

-AIHA-LAP, LLC Laboratory ID: 100671 for Industrial Hygiene samples (Metals and PCM Asbestos), Environmental Lead (Paint, Soil, Dust Wipes, Air), and Environmental Microbiology (Fungal) Direct Examination, effective until 11/01/23.

These results relate only to the items tested as received. This report may only be reproduced in full.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Paris Masoudi

Kruskal-Wallis H Statistic = 74.7486

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 142.573

95% Confidence comparison value is 19.6752 at 11 degrees of freedom

74.7486 > 19.6752 indicating a significant group difference at 5% significance level

142.573 > 19.6752 indicating a significant group difference at 5% significance level when adjusted for ties

Kruskal-Wallis H Statistic = 38.6166

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 62.011

95% Confidence comparison value is 19.6752 at 11 degrees of freedom

38.6166 > 19.6752 indicating a significant group difference at 5% significance level

62.011 > 19.6752 indicating a significant group difference at 5% significance level when adjusted for ties

Kruskal-Wallis H Statistic = 143.169

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 373.938

95% Confidence comparison value is 46.1942 at 32 degrees of freedom

143.169 > 46.1942 indicating a significant group difference at 5% significance level

373.938 > 46.1942 indicating a significant group difference at 5% significance level when adjusted for ties

Individual Well Comparisons at 1% Significance Level per Comparison

1% Z score is 2.32634

Calculation Results:

Kruskal-Wallis H Statistic = 55.2043

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 289.833

95% Confidence comparison value is 46.1942 at 32 degrees of freedom

55.2043 > 46.1942 indicating a significant group difference at 5% significance level

289.833 > 46.1942 indicating a significant group difference at 5% significance level when adjusted for ties

Individual Well Comparisons at 1% Significance Level per Comparison

1% Z score is 2.32634

Calculation Results:

Kruskal-Wallis H Statistic = 3.86935

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 129.309

95% Confidence comparison value is 46.1942 at 32 degrees of freedom

3.86935 < 46.1942 indicating no significant group difference at 5% significance level

129.309 > 46.1942 indicating a significant group difference at 5% significance level when adjusted for ties

Individual Well Comparisons at 1% Significance Level per Comparison

1% Z score is 2.32634

Calculation Results:

Kruskal-Wallis H Statistic = 35.4061

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 324.464

95% Confidence comparison value is 46.1942 at 32 degrees of freedom

35.4061 < 46.1942 indicating no significant group difference at 5% significance level

324.464 > 46.1942 indicating a significant group difference at 5% significance level when adjusted for ties

Individual Well Comparisons at 1% Significance Level per Comparison

1% Z score is 2.32634

Mean background rank is 191.5

Calculation Results:

Kruskal-Wallis H Statistic = 226.713

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 355.479

95% Confidence comparison value is 46.1942 at 32 degrees of freedom

226.713 > 46.1942 indicating a significant group difference at 5% significance level

355.479 > 46.1942 indicating a significant group difference at 5% significance level when adjusted for ties

Individual Well Comparisons at 1% Significance Level per Comparison

1% Z score is 2.32634

Calculation Results:

Kruskal-Wallis H Statistic = 72.9206

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 327.223

95% Confidence comparison value is 46.1942 at 32 degrees of freedom

72.9206 > 46.1942 indicating a significant group difference at 5% significance level

327.223 > 46.1942 indicating a significant group difference at 5% significance level when adjusted for ties

Calculation Results:

Kruskal-Wallis H Statistic = 68.1852

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 268.077

95% Confidence comparison value is 46.1942 at 32 degrees of freedom

68.1852 > 46.1942 indicating a significant group difference at 5% significance level

268.077 > 46.1942 indicating a significant group difference at 5% significance level when adjusted for ties

Individual Well Comparisons at 1% Significance Level per Comparison

1% Z score is 2.32634

Calculation Results:

Kruskal-Wallis H Statistic = 35.1805

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 344.545

95% Confidence comparison value is 46.1942 at 32 degrees of freedom

35.1805 < 46.1942 indicating no significant group difference at 5% significance level

344.545 > 46.1942 indicating a significant group difference at 5% significance level when adjusted for ties

Individual Well Comparisons at 1% Significance Level per Comparison

1% Z score is 2.32634

Calculation Results:

Kruskal-Wallis H Statistic = 1.54805

Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 38.0866

95% Confidence comparison value is 43.773 at 30 degrees of freedom

1.54805 < 43.773 indicating no significant group difference at 5% significance level

38.0866 < 43.773 indicating no significant group difference at 5% significance level when adjusted for ties

Calculation Results:

Kruskal-Wallis H Statistic = 53.5806
Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 278.75
95% Confidence comparison value is 43.773 at 30 degrees of freedom
53.5806 > 43.773 indicating a significant group difference at 5% significance level
278.75 > 43.773 indicating a significant group difference at 5% significance level when adjusted for ties

Kruskal-Wallis H Statistic = 62.7039
Kruskal-Wallis H Statistic (adjusted for tied non-detects) = 102.1
95% Confidence comparison value is 43.773 at 30 degrees of freedom
62.7039 > 43.773 indicating a significant group difference at 5% significance level
102.1 > 43.773 indicating a significant group difference at 5% significance level when adjusted for ties

Notes:

1. Original data are not transformed.
2. Kruskal-Wallis (K-W) non-parametric test is performed on all samples.
3. K-W detects are screened for false positives with NPTI.
